ROOF NOTICE

TO WHOM IT MAY CONCERN:

When performing fumigations it is necessary to walk and work on roofs of structures. This obviously creates situations where damage to delicate or old roofs can be unavoidable. We do not wish to unnecessarily damage anyone's roof and will use extra care when dealing with fragile roof surfaces. To minimize damage and avoid any misunderstanding, we are making the following recommendations:

1. A representative of our company will, if requested, prior to fumigation be available for appointments to go over your roof conditions.
2. If you have had a roof inspection by a roofer within the last year or had any repairs to your roof covering done, please advise us prior so we can make certain there are no discrepancies.
3. Upon arrival at the job site, our crew will check the roof and document any previous damage, and in some cases, our expectations of the possibility of further damage or breakage during fumigation.
4. We request the owner, agent, or roofer to be present at the time we place the tarps on the structure as well as when we remove them. This should assure all parties of the care exercised by our crew. At anytime during the process should the owner, agent, or roofer feel that the damage is more than expected all work can be stopped.

WAIVER FOR DAMAGES TO TILE OR OTHER DELICATE TYPES OF ROOF COVERINGS

I (we) have been informed by Bugmasters that due to the brittle and fragile nature of tile, metal or other delicate roofs, some damage may occur while placing and removing tarpaulins in the course of fumigation of the structure.

With full knowledge thereof, I (we) hold harmless Bugmasters from the entire risk of damages during the course of fumigation of this structure.
